Any other suggestion

6 responses

Nothing

Good to know the staff is eager to make relevant changes in the syllabus

The degree is certificate a paper and efforts need to on how they are industry ready

In terms of Mathematics, the course is designed well however it lacks the understanding of practical applicability, for example, how is linear algebra is getting directly used in the field of data science.

Must tie up with more industry partners to enhance real world application knowledge and experience, thereby motivating some students to choose it as their career path.

Basic and fundamental concepts should be well explained
